Programming Languages & Translators: BachEnd (Final Project)

Audrey Acken, Eden Chung, Yahya ElGawady, Apurva Reddy, Emily Yin

BachEnd Motivation

- Musicians can write sheet music **efficiently**
- Current tools are either...
  - **Tedious** and **not typed**
  - **Complicated**
- Export code as a standard **sheet music PDF**
- BachEnd syntax is both **intuitive** and **flexible**

Language in one slide (song.bach)

```
NUMBER main () {
    NOTE xx!
    WRITE(NAME="My Song", TEMPO=100, CLEF=TREBLE, TIMESIGNATURE=(4,4), KEYSIGNATURE="C") {
      [C# E 2C_E_G]!

      xx = [4C 4C 4C 4C]!

      REPEAT(2) {
        xx!
      }

      TRANSPOSE(4) {
        xx!
      }
    }
}
```

Features

- Syntax
  - Functions, built-in features in ALL CAPS
    - Easily identifiable from user variables
    - Matches syntax of musical notes
  - “!” (exclamation mark) as line delimiter
    - Intuitive line endings for non-programmer musicians
- Built in musical functions
  - REPEAT(times)
  - TRANSPOSE (half_steps)
  - WRITE(notes)
- Everything must be declared within the MAIN function, and anything to be generated in the final PDF must be written within the WRITE function

Notes/Rests

The NOTE type represents a single musical note, it has the following properties:

- Properties:
  - PITCH:
    - A STRING representing the note name (ex "C#").
    - Values: Ab, A, A#, Bb, B, B#, Cb, C, C#, Db, D, D#, Eb, E, E#, Fb, F, F#, Gb, G, G#, R
  - OCTAVE:
    - The OCTAVE specifies the register of a note. BachEnd octaves are represented as a NUMBER, where middle C is typically 4.
    - We would specify the note B in the 5th octave as this: B5
  - LENGTH:
    - The LENGTH represents the length of a note.
    - BachEnd lengths are represented as a NUMBER, defined in powers of two, where 1 = a whole note, 2 = a half note, 4 = a quarter note, 8 = an eighth note, 16 = a sixteenth note, etc.).
    - We would specify the note B as a quarter note as this: 4B
- Putting it together, if we wanted to define the note B in the 5th octave as a quarter note, we would write 4B5

The REST type represents a musical rest. It is defined as R. Like NOTE, the REST type has a length property. If we wanted a quarter rest we would write 4R.

```
NUMBER main () {
    WRITE(NAME="Twinkle Twinkle", TEMPO=100) {
        [4C 4C 4G 4G 4A 4A 2G6 2R]
        [F F 4E 4E 4D 4D 2D6 2R]!
    }
}
```

If duration and octave are unspecified, they default to a quarter note (duration 4) at octave 4

Rest (half note timing)

One D note (half note timing), of octave 6

Combined Notes

- Grouping of notes with the same duration and/or octave

```
NUMBER main () {
    WRITE(NAME="Notes", TEMPO=120) {
    [8(A3 B3 C D) 4(E F G)]!
  }
}
```

Group of notes all with eighth note duration marked by ()

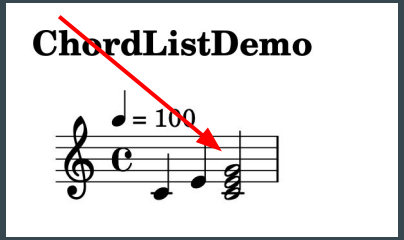
Chords

A CHORD is a combination of multiple NOTE values played simultaneously.

- Say you wanted to play a C major triad CHORD, It would be written as C_E_G.
- Like NOTE, you can specify PITCH, OCTAVE and LENGTH. Say we played a C major triad CHORD in the 3rd octave for an eighth note, we would write 8C_E_G3.
- The default value for OCTAVE is 4 and for LENGTH is 4.
- A CHORD may contain notes from more than one OCTAVE. Consider the C Major CHORD which would be written as C4_E4_G4_C5
- A CHORD may contain notes from more than one LENGTH. Consider this chord from the first measure of Beethoven's famous *Sonata No. 8 "Pathetique"*. This would be written as 4B_16G 16(E G E)

```
NUMBER main () {
  WRITE(NAME="ChordListDemo", TEMPO=100, CLEF=TREBLE, TIMESIGNATURE=(4,4), KEYSIGNATURE="C") {
    [C E 2C_E_G]!
  }
}
```

C major chord



Making a song

- WRITE needs the parameters NAME and TEMPO

```
NUMBER main () {
    WRITE(NAME="Fur Elise", TEMPO=120) {
        [8R 8E5 8D#5 8E5 8D#5 8E5 8B4 8D5 8C5 8A4]!
    }
}
```

Making a song

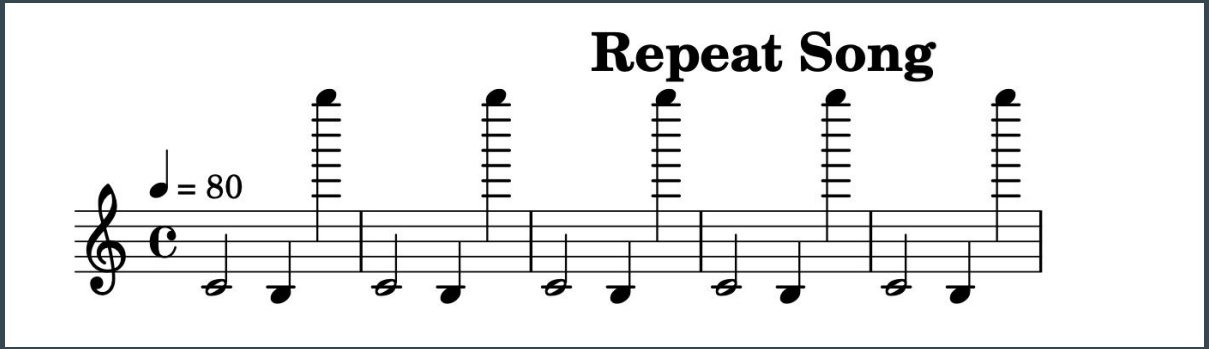
- We can also add certain optional arguments, such as clef, time signature, and key signature
  - If omitted, it will default to treble clef with time signature (4,4), and key signature C major.

```
NUMBER main () {
    WRITE(NAME="Fur Elise", TEMPO=120, CLEF=TREBLE, TIMESIGNATURE=(3,8), KEYSIGNATURE="A") {
    [8R 8E5 8D#5 8E5 8D#5 8E5 8B4 8D5 8C5 8A4]!
  }
}
```

REPEAT(times)

- Repeat a sequence of notes a number of times

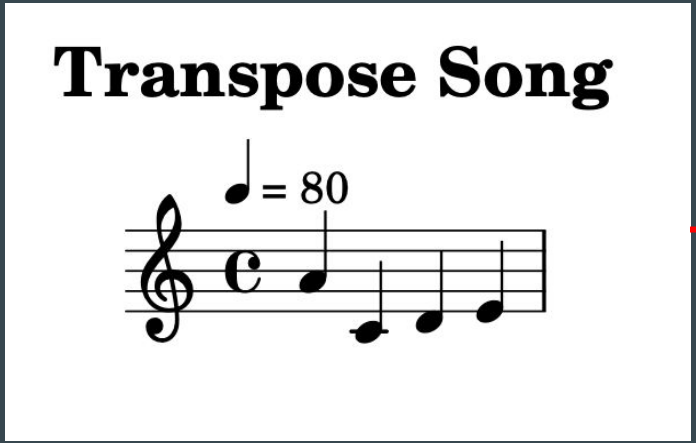
```
1  NUMBER main () {
2      WRITE(NAME="Repeat Song", TEMPO=80) {
3          REPEAT(5) {
4              [2C 4B3 G7]!
5          }
6      }
7  }
```



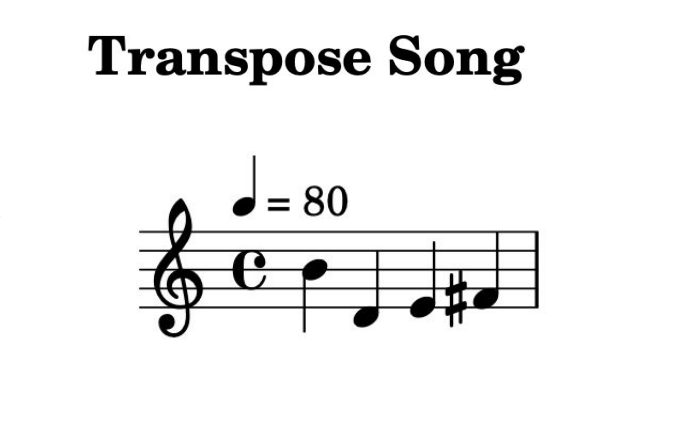
TRANSPOSE(half_steps)

- Shift sequence of notes up/down by a number of half steps

```
NUMBER main () {
    WRITE(NAME="Transpose Song", TEMPO=80) {
        TRANSPOSE(2) {
            [A]!
            [C D E]!
        }
    }
}
```



Each note shifted up 2 half steps



Demo
